Guntermann & Drunck GmbH

Monitoring Products for Air and Ground Traffic Control

KVM increases efficiency in mission-critical applications

Guntermann & Drunck GmbH is one of the leading German manufacturers of high-quality monitoring products for air and ground traffic control. The company has 25 years' experience in developing and realising professional products made for realtime signal distribution, extending and switching.

Being an SMB enterprise, G&D has the flexibility to react to customer demands. Integration of special hardware or customer-specific functions is no problem. Adaptations on the operator side, e.g. Wacom hardware, as well as on the computer side are carried out by the company.

Having core competencies such as development, product management, sales and after-sales support in house enables Guntermann & Drunck to be at your side – from planning up to support. At G&D, people, not answering machines, are at your service. Broadcasting, monitoring and remote monitoring in control and plant rooms of mission-critical environments are only some of G&D's diverse KVM applications. Air and road traffic control professionals and leading system integrators from over 20 countries trust in the company's experience in combining standard modules to complete solutions, customised to the needs of different industries.

Guntermann & Drunck GmbH - Small KVM Switch - High Capacity

With the DVICenter DP16, the newest member of the DVICenter family, Guntermann & Drunck now covers all size requirements, a KVM switch might encounter. In addition to the large solutions DP32 and DP64, the "small" KVM matrix switch is the perfect fit for installations up to 15 computers.

DVICenter DP16

	DVICenter DP16	DVICenter DP32	DVICenter DP64
Native Ports	16	32	64
No. of computers	1 - 15	1 - 31	1 - 63
No. of consoles	15 - 1	31 - 1	63 - 1

*For other enquiries, please contact the G&D sales team.

DVICenter ports

G&D's DVICenter series combines the functions of KVM switches and → extenders. The possibility to assign computer and console ports according to their wishes gives users the freedom to tailor the system to their individual needs.

The signal transmission of DVICenter devices includes the following parameters:

- Single-Link DVI in resolutions up to 1920 x 1200 @ 60 Hz
- PS/2 and USB keyboard/mouse
- Analogue audio, bidirectional with resolutions of 24 bits
- Transmission via CAT-x cable, bridges distances of up to 560 m
- Via fibre optics max. 10,000 m
- No additional software required

Additionally, DVICenter devices provide many expansions such as power switching, extending the range via optical fibres, intercommunication functions, network and web configurations as well as redundancies.

To ensure the system's safety, the devices offer the "DC-Monitoring" feature. It provides status information of the DVICenters via their web interfaces that can be sent (SNMP trap) or queried (SNMP GET).

Any DVICenter variants can be directly purchased at G&D or at their partners.
