DIGITAL ROUTING SWITCHERS

Utah Scientific UTAH-400 series

Switchers have been enhanced with embedded audio signal processing, meaning they can deserialize and decode a signal into their component data streams without compromising overall operational reliability; audio channels are shuffled automatically without an outboard device or manual intervention; also new is a virtual control panel to provide an easy-to-read display of the video signals.

Turn your 2D Content into 3D in Real Time

VC1-2D-3D
Soft 3D Processing

The VC1-2D-3D is a brand new software option for Teranex's dual channel Universal Format Converter & Frame Synchronizer, the VC100.

Using your existing 2D images in any format or frame rate, you'll be able to instantly create 3D programming, revive 2D archives and libraries for 3D distribution, or mix 2D material with live 3D sources and create seamless 3D programming.

The Dual Channel VC100

1RU, two independent Universal Format Converters & Frame Synchronizers or one 3D Stream.
