G&D in BSKyB Sky Studios project

01 September 2011

Story Code : cp03

project, which included KVM installations for several hundred servers and desktop computers.

Harlequin One was developed with a [focus on sustainability](#). G&D says its KVM solutions offer a multitude of benefits in this regard, with multi-platform content production studios able to be heat- and noise-free as computers are stored access-protected in cooled data rooms. The KVM technology also facilitates 'seamless' computer interoperability and an efficient workflow environment.

Specific G&D solutions implemented by Omnio include the CATCenter NEO line KVM matrix switcher (pictured), and the DVIVision and DL-Vision KVM extenders.

Paul Norton, managing director of Omnio Technologies, commented: "The need for efficient, reliable technology to reduce the overall energy consumption of BSKyB's technical facilities made us plan with G&D's hardware. The ease of use of their products, the fact that they are extremely reliable, intuitive and backed by the best technical and after-sales support Omnio had experienced gave us no hesitation in recommending that BSKyB implement G&D solutions as the KVM infrastructure within Harlequin One. Confidence in our partners is crucial and that's why we trust in G&D."
